

Places to go for further information and resources

World AIDS Day Website - www.worldaidsday.org

World AIDS Day, which is on 1 december every year, is an international day dedicated to raising awareness about HIV and showing support for the millions of people living with HIV globally. The aim of the day is to draw peoples attention to the challenges and consequences of the epidemic and, ultimately, to prevent the spread of HIV and improve the lives of people living with the virus. A great starting point for information about HIV in the UK is the World AIDS day website. This provides facts and information about HIV, details of events around the country, ideas for how to get involved and a shop where you can order a range of educational and awareness-raising materials.
